## **MY APPROACH TO GEOETHICS (LETTER TO THE CONVENORS)**

Dear Convenors:

Thank you for sending Pribram invitation. I will see to the possibility of attending the seminar.

But

What I can do (usefully I mean), I suppose, since I'm in another field of expertise, beforehand is to explain clearly my field, then we can know if there's a possible connection and a field for co-operation.

What I want to do, I mean as a long-term goal, is to create a career of geoethics.

What is my definition of it is

**"An interdisciplinary liaison when environment-related problems arise".**

As far as I know, there's no specific profession to care and give a hand when humans and nature clash together... I mean, when humans can't get a clear, noble and efficient enough picture of complex environment-related situations... so we tend to solve problems at a too expensive costs, be that cost in damage (the unnecessary which could be diminished or abolished) to the environment, to human patrimony and even to human lives.

I believe that there can be done something useful.

What I can do about it is to propose to create a new study. It's interesting that FIRST came to my mind the term "geoethics", THEN, searching the web about it, I FOUND IT!

I propose to blend psychology (specifically Integral Psychology), ecological knowledge (as proper technologies), and negotiation skills, so to help, when those problems arise that are so costly in the factors above mentioned, there will be an integrating approach to solve those topics the most cheaply in terms of avoiding unnecessary damages (be them to nature, economics or human domains).

Probably you're just too busy too, but anyway I took your time writing this. If you reach this far I sincerely thank you for your time. I'm sure this idea is ringing an alert bell in your heart.

Yours truly

Adrian Kertesz
